PROFESSIONAL SUMMARY

Senior software engineer with over ten years of experience building and launching web applications for enterprise healthcare, financial services, and Fortune 500 clients. Currently lead front-end architecture and the design system for a multi-billion-dollar healthcare technology company's applications and web properties. I am comfortable managing an application from start to finish, including architecture and standards, hands-on React and TypeScript development, accessibility, continuous integration and delivery, and cloud-hosted delivery. I translate technical decisions for stakeholders, executives, and client implementation teams. I have a strong track record of leading teams to deliver complex applications on time or ahead of schedule.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML5, CSS/SCSS, SQL / PostgreSQL, PHP, ColdFusion

Frameworks & Libraries: React, Next.js, Angular, Node.js, Tailwind, Bootstrap

Architecture & Practices: Design systems and component libraries, front-end architecture, REST API and JSON integration, WCAG 2.x / ADA accessibility, performance and SEO optimization, responsive design, technical documentation, code review and mentorship, AI-assisted development (Claude, Claude Code), Agile / Scrum

Cloud, DevOps & Tooling: Microsoft Azure, Azure DevOps, Docker, CI/CD pipelines, Git, GitHub, Bitbucket, Netlify, Supabase, Vercel, npm, Jira

Content & Data: Craft CMS, Sanity CMS, WordPress

Design & Collaboration: Figma, Sketch, InVision, Adobe Photoshop, Affinity Designer, stakeholder communication, client presentation

PROFESSIONAL EXPERIENCE

Premier Inc. — Senior Front End Developer

June 2024 – Present · Charlotte, NC

- Lead design and front-end development across the applications and web properties of a multi-billion-dollar healthcare technology company, architecting a scalable design system that standardizes shared components for teams organization-wide.
- Delivered the full redesign and relaunch of premierinc.com, the company's primary customer-facing web application, as part of the digital and web team.
- Build and maintain applications in React, TypeScript, and CSS/SCSS, partnering with design, product, and back-end teams from requirements through release.
- Set organization-wide standards for accessibility, performance, and reusable component architecture, and mentor engineers on adopting them.
- Apply AI-assisted development (Claude, Claude Code) to scaffolding, refactors / migrations, test coverage, and documentation. Help set team expectations for where generated code is and isn't appropriate, with hands-on review of anything that reaches production.
- Serve as technical point of contact for design system adoption, reviewing implementations, proactively resolving integration and technical challenges across teams.

First Citizens Bank — Software Developer II

October 2023 – June 2024 · Charlotte, NC

- Spearheaded the refactor of a full-scale internal employee application built on Angular 2, TypeScript, and TIBCO cloud-based services, modernizing legacy patterns and improving maintainability.
- Used Microsoft Azure for cloud-hosted development environments, branch strategy, version control, and release tracking.
- Coordinated with QA, security, and business stakeholders in a regulated banking environment to meet compliance and release requirements.

CapTech Consulting — Software Engineer, Senior Consultant

November 2020 – May 2023 · Charlotte, NC

- Built and delivered web applications, dashboards, and digital products for Fortune 500 clients — including multiple large financial services companies — using JavaScript, TypeScript, React, Angular, and headless CMS (Craft, Sanity) with strong CI/CD and accessibility practices.
- Served as lead front-end engineer on multi-team enterprise engagements, owning development direction, dev team communication, deadline setting, asset management, and client-facing presentations.
- Rebuilt legacy Angular applications in modern React and TypeScript, bringing out-of-date codebases up to current standards.
- Translated ambiguous client requirements into technical solutions and architecture recommendations alongside project managers, designers, copywriters, accessibility specialists, and client implementation teams.
- Designed and implemented responsive, accessible, mobile-friendly interfaces using Figma, Sketch, and InVision, and applied Agile practices to ship on or ahead of schedule across concurrent engagements.

SignUpGenius — Web Developer

July 2016 – November 2020 · Charlotte, NC

- Coded dynamic, responsive applications, landing pages, and transactional emails with HTML, CSS/SCSS, JavaScript/Angular, and PHP/ColdFusion for a high-traffic consumer scheduling application.
- Designed multiple applications, landing pages, and emails in a team-based environment using Sketch, Affinity Designer, and InVision Freehand.
- Ran routine SEO and performance optimization passes across the full SignUpGenius website and application.
- Worked with UI/UX, Development, Marketing, QA, and Support teams in tandem within an Agile process to ship the best product in the shortest time.

SELECTED PROJECTS

premierinc.com Redesign & Relaunch — Senior Front End Developer, Premier Inc.

Rebuilt and relaunched Premier's primary customer-facing web application as part of the digital and web team, applying the organization's design system and accessibility standards. The relaunched site was named 2025 Best Health Care Website by the Web Marketing Association's WebAwards, and the team received one of Premier's five company-wide Team Values Awards for the project.

Bank of America — Lead Front-End Engineer, CapTech Consulting · bankofamerica.com

Overhauled the majority of the customer-facing bankofamerica.com application to be fully responsive and ADA/WCAG compliant, converting Angular components to React. Directed development, team communication, deadline setting, and client presentation across an internal multidisciplinary team and the client's implementation team. The work earned an accessibility award, and the majority of it remains in production today.

Capital One — Lead Front-End Engineer, CapTech Consulting

Led front-end development of a large-scale internal tool, including a full AngularJS to Angular 2+ migration. Delivered beyond the agreed scope and earned recognition from both the client and senior internal leadership.

TGL / TMRW Sports — Lead Front-End Engineer, Captech Consulting · tglgolf.com

Delivered a multi-page site for TGL (Tomorrow's Golf League, a PGA Tour and TMRW Sports venture) and a one-page launch site for TMRW Sports on an accelerated public-announcement timeline. Connected existing WordPress content to a React front-end architecture and built a Craft CMS + React blog framework. Both sites shipped under deadline, and the engagement expanded into a broader technology partnership.

Bijou — Personal Project — bijou-movies.com

Full-stack movie and TV discovery app built with React, JavaScript, and SCSS, using Supabase for authentication and a Postgres backend. Users create accounts and save favorites that persist per user across sessions. Pulls catalog data from the TMDB API, with search, curated collections, film and show detail pages, and actor/director pages.

kyleholliday.com — Personal Portfolio

React and Tailwind CSS site with light and dark theming, deployed through Netlify continuous deployment from GitHub.

EDUCATION

The Iron Yard — Front-End Engineering Program · 2016

Radford University — Bachelor of Science, Criminal Justice (Sociology minor) · Dean's List
